

# 1 We can help extend your tire mileage . . .

Tests have shown 70% of the vehicles on the road today

would benefit tremendously from being properly aligned. Proper alignment can reduce tire wear.

# 3 Diagnose problems before they get out of hand . . .

When we check your alignment, we look for situations which

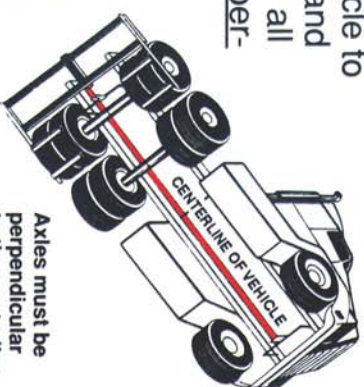

will progress into larger, more costly repair bills. Many variables cause alignment problems. Most don't happen all at once so drivers may not notice problems as they develop.

Different situations cause different problems.

# 4 Proper alignment requires trained technicians and accurate equipment . . .

As professionals, we know that in order for a vehicle to operate safely and most efficiently, all axles must be perpendicular to the chassis centerline. We use only the most advanced equipment and highly trained specialists in our shop.

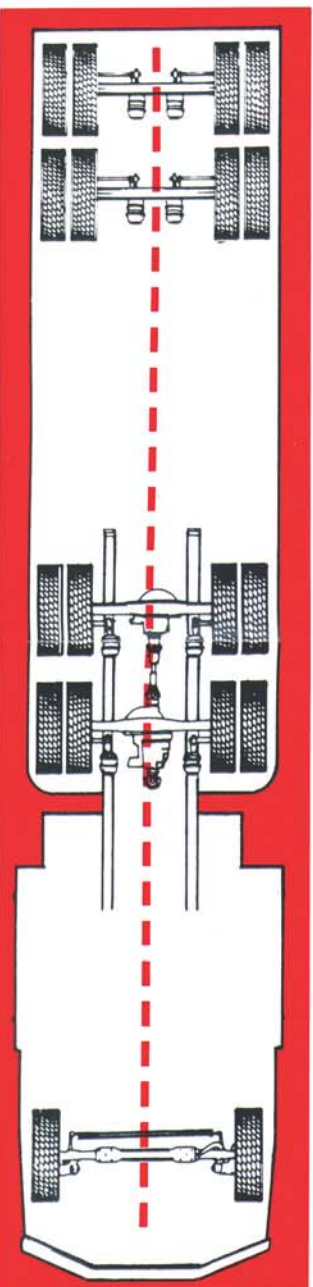

Axles must be perpendicular to the centerline of the vehicle.

# 2 Proper alignment can save an average of 2% on your fuel cost . . .

By having us align your vehicle(s), we can

reduce your vehicle's rolling resistance (tire friction and drag). When all the wheels are traveling in the same direction, it takes less energy.

# 5 "Piece of Mind" is an added bonus . . .

which you get by having us check the alignment of your vehicle(s). Whether you drive your own rig or you are responsible for a fleet with numerous drivers depending on your decisions, you can feel good knowing that you have taken the right steps to maximize the safety, comfort and handling of the vehicle(s) you command.

"We concern ourselves with more than just freight."
