

# LC7000 Series Alignment

BEE LINE WHEEL ALIGNMENT

*The Bee Line LC7000 Series laser guided computer alignment gauging system is the new benchmark for the heavy duty truck alignment industry. Every aspect of this system builds on 85 years of alignment expertise and has been refined to make alignments easier, faster and more accurate than ever. Several innovative features make this the best heavy duty truck alignment system ever from Bee Line and by far the best system on the market today.*

We know your business wants an alignment system that makes you money. We understand your business wants equipment that is designed to last. We realize you want equipment that is user friendly and easy to learn. And we know you need equipment that is accurate 100 percent of the time. With those basic needs in mind, we have designed our LC7000 Series laser guided computer to be the best alignment system on the market for today's alignment technicians. Please take a look at these advantages from our LC7000 Series and consider whether or not you can afford to use anything else but the best. Our competition can not compete with our proven alignment philosophy, our stability, our accuracy, our outstanding service and most importantly, our 85 years of experience. We are confident you'll realize why serious professionals choose Bee Line every time.

## **Precision you expect from Bee Line.**

The LC7000 continues the excellence of laser accurate measurements up to 1/1000th of an inch. The LC7000 instantly produces live measurements that are consistently repeatable. When making corrections, live readings serve as the guide to bring the vehicle into the optimum alignment position. Our alignment accuracy is so precise, we developed our own alignment specifications that align vehicles better than the O.E.M. specifications

## **A self reliant alignment system.**

Bee Line gives you the ability to maintain the precision of your Alignment system. Unlike our competition, our entire system can be calibrated in a few minutes by any technician in your shop. WindSpeed 7000 Alignment Software will remind technicians to calibrate on regular intervals that are based on your work load. There is no downtime waiting for a service rep to maintain the accuracy of your alignment system. When you own Bee Line equipment, we make sure your shop is making money in the alignment business by backing up our system with the best warranty in the industry.

# Laser Accurate Precision

6

## New Bee Line Interactive wireless alignment heads increase efficiency.

Our alignment heads feature color LCD screens that give the technician the option to perform alignments right at the wheel. Each screen in our WindSpeed 7000 Software is displayed on the head and prompts the technician through an alignment just as if he were looking at the monitor. This

advantage dramatically reduces the time to gauge the alignment of a vehicle. For additional speed and convenience, our heads also contain lasers that automatically seek out their target area on the opposite head. Lithium Ion batteries charge heads for up to 10 hours.

New interactive alignment heads are now a "workstation" for the technician.

Whenever a step is illustrated on the computer monitor...

...the same step is displayed with live readings on the head!

## A cabinet with everything.

The new LC7000 cabinet charges the rugged alignment heads in a vertical position that reduces the chance for damage and saves shop space. Additional exterior storage racks safely hold wheel mounts when they are not in use. The cabinet has also made work easier for the technician by ergonomically designing features like a swivel mounted 19" flat panel monitor, a foot rest bar and a large gliding drawer for the color printer. There are even coffee cup holders built into the work top to prevent accidents!

## Software that adapts to the user.

WindSpeed 7000 Alignment Software has the capability to assist beginners with pop up reminders, extensive help screens and help videos; while more experienced technicians have the option to customize their workflow to fit their skill level. When alignments are complete, detailed before and after color documents are printed for the customer. Comprehensive database management options give your shop the ability to save and recall any previous alignments.

The sleek new LC7000 Series from Bee Line combines convenience with efficiency.

**85 YEARS ON THE ROAD, DRIVING THE ALIGNMENT INDUSTRY.**
