Zydax Work Zone Safety Alarm

The Zydax Work Zone Safety Alarm is effective and easy to use. The controls provided, combined with intuitive labeling, make it a device quickly made operational even by the first time user. This rugged, 120+ decibel (each) alarm is designed to operate on any job site in extreme weather conditions. Each unit provides the selection of three different audio sounds. This self-contained alarm unit has enough battery power to operate for weeks under normal use.¹

Each unit automatically acts as a repeater and relays alarm signals received from any of the "Remote Activation Handsets" (RAHS stored in cover, see Photo 1) to other units. Communications distance is rated at 1000 feet (300 m) for the RAHS and 3000 feet (914 m) unit to unit. This feature allows for the use of single or multiple alarm units all being set off from any point within the setup. Pressing any button on the provided RAHS triggers an alarm.

The rugged unit is also designed to receive 1 inch (2.54 cm) square tubing, providing the ability for elevating the unit and/or mounting it to sign standards, posts, or other devices. In addition to manual activation, automated alarming caused by a perimeter intrusion and the ability to set off radar detectors are available as options. Built in telescoping handle and wheels make it easy to move multiple units.
