

# Zydax

*Intelligent Environmental Sensors*

The **ZIGI** is custom built to meet the users needs for depth and quantities of moisture and temperature sensors. Serial communications to a local computer, an internal modem and direct burial power supplies are standard. Air temperature/humidity measurements can be added at the time of your order. An external modem can also be added.

When combined with the Enhanced Edition of the Zydax **Data Collection Program (ZDCP)**, alarm conditions can be set by the user to determine when actions are required such as implementing/removing weight restrictions or starting/stopping irrigation. The **ZDCP Enhanced Edition** allows the user to select several types of alarms such as a screen color change to indicate crossing a threshold in the logging computer, initiating phone calls to up to 6 numbers or turning flashing lights on or off. Users can easily set-up "rules" based in the conditions that are important to them.

*all Zydax sensors are reasonably priced, have several communication options available, and use open protocols.*
