## DIRECT APPLICATION ANTI-ICING SYSTEMS

Anti-icing operations involve applying an ice melting product to the pavement in order to inhibit development of a bond between snow or ice and pavement surface. Our Direct Application Anti-icing Systems (DAS-Series Systems) are designed to directly apply liquid de-icers to road surfaces. Controlling Dust on unpaved surfaces can be accomplished by directly applying calcium or magnesium chloride with our DAS-Series systems.

*EZ load unit*

*Swap unit*

### EZ Load & Swap Units

- Frame construction: easy load/unload feature, free-standing carrier frame made of hot dipped galvanized steel for corrosion protection
- Tank Specifications: 925, 1035, 1235, 1335, 1635 or 1800 gallon tanks contain Liquid Surge Stabilizers total baffle system
- 1, 2, or 3 lane coverage spray bar
- Available as a hook-lift system, skid-mounted system or trailer system
- On/off controller in cab
- Ground speed control options
- Hydraulic driven pump
- Optional stainless steel spray bar

## DIRECT APPLICATION ANTHICING SYSTEMS

*DAS-1-G5.5-325-FM*

### **DAS-1-G5.5-325-FM**

This direct application anti-icing system is designed to apply liquid anti-icers or de-icers directly to the road surface from the 225, 325, 500 or 725 gallon frame mounted tank in a pickup truck. The spray nozzles have a straight stream and will cover an 8 to 12 foot wide span. This model is a slide-in type of system, built to be easily loaded and unloaded with a forklift.

*DAS-1-6.6H-225-TR*

### **DAS-1-6.6H-225-TR**

This unit is designed to apply liquid anti-icers and de-icers directly to sidewalks or road surfaces from a 225 gallon 3-point hitch frame mounted tank on a large tractor. The spray nozzles spray a straight stream covering a 4 to 6 foot wide span.

*DAS-1-3.5EVS-125-ATV*

### **DAS-1-3.5EVS-125-ATV**

This system is ideal for applying anti-icers and de-icers to sidewalks and road surfaces as well as parking garages. This 125 gallon tank can be frame mounted onto several types of all-terrain vehicles (ATVs).
