

8700 EVO 2 DUAL BURN NEW HEATED 7" ROUND HEADLIGHT

DUAL BURN™ MEETS SMARTHEAT™ TECHNOLOGY

The Model 8700 Evo 2 Dual Burn headlights are now available at your authorized J.W. Speaker dealer.

HEATED LED LIGHTS THAT SNOW & ICE CAN'T STOP.

Combining SmartHeat and Dual Burn Technologies

When it's critical to make the delivery, visibility and safety are drivers' top concerns. The Model 8700 Evo 2 Dual Burn is now available with a heated lens, delivering widespread visibility and a powerful punch of light down the road, while keeping the lens clear of snow and ice build-up.

The Best Lights for the Worst Conditions

Heated lenses are just one more reason the 8700 Evo 2 Dual Burn headlights are designed to survive the harshest conditions. Industry-leading heated lens technology and solid optics direct light precisely where it's needed, increasing visibility and providing a higher level of safety for drivers.

Not your Average High Beam.

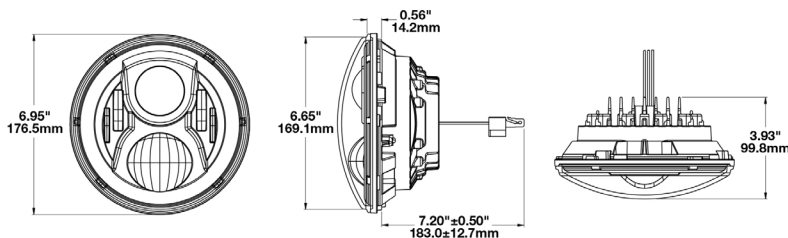

Dual Burn technology goes beyond the average high beam pattern with a three-part beam pattern designed to help people see better and stay safe: **Low Beam** for light directly in front of the vehicle; **ComfortLite** for light above the horizon; and **High Beam** for a punch of light down the road.

Model 8700 Evo 2 Dual Burn

LED High & Low Beam Headlight; 12-24V DC Input.

- SmartHeat™ heated lenses to melt away ice & snow, and clears fog during warm months
- Dual Burn™ high beam for increased ditch-to-ditch visibility
- Uses less power than conventional halogen headlights
- Plug & play installation using a standard H4 connector
- 40,000-hour LEDs reduce maintenance and downtime
